

Optum360[™] ICD-10 Readiness Assurance Review

Uncover potential risks now. Don't pay for them later.

The transition to ICD-10 is a monumental undertaking for everyone facing the deadline. If your organization has been immersed in preparations, but you want some objective assurance that each of your facilities is on the right track, let Optum360 help. We offer a four-week ICD-10 Readiness Assurance Review to ensure that your teams have addressed all critical impact areas, and the appropriate mitigation plans are in place.

In just four weeks, Optum360 will:

Complete a comprehensive review of ICD-10 work streams, strategies, tactical action plans and overlapping initiatives

Benchmark your organization's current state of ICD-10 preparedness and planning against industry best practices and standards

Provide a risk analysis, including a risk assessment and action plan, to remediate gaps between your current state and industry best practices and standards

Optum360 consultants follow a three-stage process that starts with data collection, review and workshop scheduling. We benchmark your plans and progress against industry standards, and conduct focused remediation workshops with your ICD-10 team to address your key risks, decision points, education requirements and overall strategy.

Following our analysis and workshops, we provide you with in-depth risk assessment and critical path dashboards along with executive reports to clearly communicate your organization's readiness status. For each major work stream, we document risk level, current state and industry standard, and recommended mitigation plans/considerations, as appropriate, to help you make a smoother transition and protect revenue.

Make sure your hard work and preparation will pay off. Request an Optum360 ICD-10 Readiness Assurance Review today.
